

**Allfarm Ratex® mouse and rat bait.**

**Allfarm Ratex®** is a ready-to-use, grain-based bait which is highly palatable to rats and mice. It is suitable for controlling rodent pests in domestic and industrial situations, around farm buildings, wharf areas, and meat-works (non-production areas).

Allfarm Ratex® is a **multi-feed** rodenticide, which means it has a greater safety margin than products containing Brodifacoum, or other single-feed rodenticides.

APVMA Approval Number: 49256.

**When should you use Allfarm Ratex®?**

Allfarm Ratex® is suitable for most domestic and commercial applications. It is a multi-feed rodenticide and rodents must consume Ratex® over several days to receive a lethal dose. This gives it a greater safety margin than single-feed products, and is therefore a better choice in situations where there is any risk of domestic animals or wildlife consuming the product.

If you require a faster-acting, single-feed rodenticide, especially in situations where the poisoning of other animals isn't a serious concern, we recommend **Allfarm Raticide®**.

**Active Ingredient:**

Coumatetralyl (0.38 g/kg).

**Directions:**

- **Do not place baits in the open.** We strongly recommend that lockable bait stations are used when baiting. These may be purchased separately from Allfarm – see our contact and ordering details at the end of this sheet.
- Eliminate, as far as practicable, all alternative food sources.
- Place baits in infested areas, under cover and away from moist areas. Do not exceed 3 metres between baits for mice, or 9 metres for rats.
- Inspect baits daily. If eaten quickly increase the number of baits. Continue observation and replenishment until no more bait is eaten.
- Baiting for at least 2 weeks is necessary to reduce mouse or rat numbers.
- **Keep away from children and domestic animals.** If necessary cover baits so that only mice and rats have access to them (preferably in lockable bait stations).
- Caution is required in use of this product in and near piggeries. Do not allow to contaminate pig food.

**Bait Stations:**

Allfarm sells heavy-duty rodent bait stations as single units or in packs of 6. The bait stations are tamper-resistant, with a large-capacity bait chamber and a low profile. They come with a two-prong key to keep your rodent bait secure. See Ordering at the end of this document for more information.

**First Aid:**

If poisoning occurs contact a doctor or veterinarian immediately, or call the Poisons Information Centre on 13 11 26 (Australia).

The active ingredient of this product is **Coumatetralyl**. It is an anticoagulant and is treated with Vitamin K1 (phytomenadione). Additional information is listed in the Material Safety Data Sheet.

**Ordering:**

Allfarm products may be ordered from our website: <https://www.allfarm.com.au>  
or by telephone: (03) 5979 4488.
